

Huzaifa Rashid

AI Engineer

+92-310-7164892 | huzaifaras10@gmail.com | linkedin.com/in/huzaifarashid1 | github.com/huzaifa1-0 | huzaifarashid.me

SKILLS

Programming and Backend: Python, JavaScript, C++, FastAPI, RESTful APIs, GitHub API
AI / Machine Learning: LLMs, RAG, Hugging Face, LangChain, scikit-learn, TensorFlow, OpenCV
Search, Data and Security: FAISS, Pinecone, ChromaDB, Static Code Analysis, AI Code Auditing
DevOps and Integrations: Docker, Git, CI/CD, Web3 (MetaMask), Stripe

EDUCATION

University of the Punjab Lahore	2022-2026
<i>Bachelor of Science in Computer Science</i>	3.05 CGPA

EXPERIENCE

Associate Software Engineer (AI/ML) <i>(TDC) THE DEV CORPORATE</i>	March 2026 – Present
Engineered AI-powered backend features using Django, including a natural language expense tracking system that converts user text commands into structured expense records with automatic category classification, and developed a resume parsing pipeline to extract structured candidate information for an HR management platform.	
Web Developer (Internship) <i>BIGIMMERSIVE</i>	June 2023 – Aug 2023
Built responsive user interfaces and implemented front-end functionalities using React and JavaScript for diverse web applications.	

PROJECTS

eMCP Nexus (FYP) | *FastAPI, RAG, FAISS, Docker, MetaMask, Web3, Stripe*

- Designed and developed an AI-powered MCP marketplace enabling AI engineers to deploy, monetize, and scale MCP tools using a pay-per-task execution model with integrated Stripe and Web3/crypto billing.
- Built a semantic search and discovery engine using FAISS and vector embeddings, allowing users to find MCP tools via natural language intent instead of keyword-based search.
- Integrated a RAG-powered chatbot and recommendation system to provide real-time integration guidance, troubleshooting, and tool rankings based on usage and quality metrics.
- Engineered a GitHub-to-deployment workflow that automatically parses repositories and scales them as secure, executable FastAPI endpoints using Docker.
- Developed a comprehensive analytics and reputation system to track tool performance, earnings, and user ratings, ensuring quality assurance and visibility for top-tier creators.

AI GitHub Auditor | *Python, GitHub API, Static Code Analysis*

- Built an AI-powered tool to audit GitHub repositories, detect security/code quality issues, and track project metrics.
- Integrated Bandit, ESLint and PyLint with Phi-2 to produce clear audit summaries and detailed recommendations.
- Designed a modular, plugin-ready architecture to support future AI automation and reporting capabilities.

LegalSense | *Python, RAG, LangChain, Vector Databases*

- Designed a Retrieval-Augmented Generation chatbot for legal advisory use cases, delivering accurate, precedent-backed responses.
- Indexed legal documents using vector embeddings, significantly reducing hallucinations and improving real-time document retrieval accuracy.

Presence.AI | *Python, OpenCV, VGG, TensorFlow*

- Developed a real-time face recognition attendance system using OpenCV and VGG, achieving ~92% recognition accuracy and reducing false attendance entries.
- Implemented advanced deep learning models and notification workflows, including automated email alerts for low attendance thresholds.
